

Jatin Kumar Ray

Lead Site Reliability Engineer — Observability & Cloud Platform Leadership

+971 545961401 | jatin.kumar.ray@gmail.com | linkedin.com/in/jatinkray | Dubai, UAE

PROFESSIONAL SUMMARY

Lead Site Reliability Engineer with 14+ years of experience designing, operating, and continuously improving cloud infrastructure and Kubernetes platforms across production environments at scale. Currently leading the SRE/Observability platform at Careem (Uber subsidiary), directing reliability practices for systems processing 1 billion+ API calls daily. Proven track record leading teams of engineers, driving \$2M/year in cloud infrastructure cost optimisation, and establishing governance standards for platform reliability. Expert in Kubernetes orchestration, cloud-native architecture (AWS, GCP, Azure), and automation-first engineering culture. CKA and CKAD certified.

CORE COMPETENCIES

Cloud Infrastructure Design & Ops	Kubernetes Platform Leadership (CKA/CKAD)	Team Leadership & Mentorship	SLO Governance & Reliability
Cloud Cost Optimisation	Automation-First Culture	Multi-Cloud (AWS/GCP/Azure)	Performance Leadership

TECHNICAL SKILLS

Platform & IaC	Kubernetes, Terraform, ArgoCD, Helm, GitOps, KEDA, GitHub Actions
Cloud	AWS, GCP, Azure (multi-cloud production experience)
Languages	Golang, Python, Bash, Java
Observability	OpenTelemetry, Prometheus, Thanos, Grafana, ClickHouse, Vector, Fluentbit, Dynatrace, Datadog
Reliability	SLO/SLI/Error Budgets, Incident Management, On-Call, Capacity Planning, Chaos Engineering
Databases	ClickHouse, MySQL, Redis

WORK EXPERIENCE

Careem (Uber subsidiary)

Jun 2022 – Present

Technical Lead SRE, Observability Platform — Dubai, UAE

- Lead the design, operation, and continuous improvement of cloud infrastructure and Kubernetes platforms supporting reliability practices across production environments processing 1B+ API calls/day.
- Direct and develop a team of engineers, providing mentorship, clear delivery ownership, and performance leadership for the Observability platform team.
- Drove \$2M/year in cloud infrastructure cost optimisation through intelligent telemetry data classification, tiering, and retention policies using OpenTelemetry, Vector, and ClickHouse.
- Established governance and standards for cloud infrastructure reliability, defining SLOs, SLIs, and Error Budgets across all customer-facing services with strict availability targets.
- Built automation-first platform tooling including self-serve onboarding portal, auto-instrumentation for new microservices, and anomaly detection presets — eliminating manual toil.
- Oversaw Kubernetes-based deployments via ArgoCD, Terraform, Helm charts across multi-cloud environments (AWS, GCP) with GitOps practices.
- Pioneered AI-integrated reliability using Model Context Protocol (MCP) to connect LLMs with real-time infrastructure data for context-aware troubleshooting agents.

- Maintained 99.5% availability of customer-facing APIs through proactive monitoring, incident management, and continuous improvement.

Hungerstation (Delivery Hero)

Jul 2021 – May 2022

Senior Site Reliability Engineer — Dubai, UAE

- Maintained 99.9% target availability of customer-facing APIs across production environments.
- Managed large-scale Kubernetes clusters (200–500 nodes) with continuous improvement of reliability practices.
- Reduced cloud infrastructure costs by 50% through GCP best practices and resource optimisation.
- Reduced MTTR (Mean Time To Recovery) by 70% implementing observability stacks: OpenTelemetry, Jaeger, NewRelic, Datadog, PagerDuty.

Carrefour (Majid Al Futtaim)

Jul 2019 – Jul 2021

Senior DevOps Engineer — Dubai, UAE

- Managed Azure cloud infrastructure and Kubernetes-based microservice deployments for high-availability production systems.
- Implemented CI/CD pipelines and infrastructure monitoring with Azure DevOps, Application Insights, and Grafana.

McKinsey & Company

Aug 2018 – Jul 2019

Site Reliability Engineer — Gurgaon, India

- Led teams and built roadmaps aligned with OKRs for platform reliability and Kubernetes deployments.
- Managed CI/CD orchestration and production monitoring with Splunk, Prometheus, and Grafana.

G4S IT Services

Aug 2016 – Aug 2018

Principal DevOps Consultant — Gurgaon, India

- Provided leadership across the DevOps Group — defining policies, governance, and standards for CI/CD operations.
- Set up high-availability cloud infrastructure on GCP with Kubernetes, auto-scaling, and load balancing.

AON Services

Jan 2011 – Jul 2016

Senior Software Engineer — Gurgaon, India

- Handled enterprise application support, critical path monitoring, and client implementation for mission-critical systems.

CERTIFICATIONS

- | | |
|---|--|
| ✓ Certified Kubernetes Administrator (CKA) — CNCF | ✓ Certified Kubernetes Application Developer (CKAD) — CNCF |
| ✓ Dynatrace Verified Essentials — Dynatrace | ✓ Azure Solutions Architect Expert — Microsoft |
| ✓ Azure DevOps Engineer Expert — Microsoft | ✓ Azure Security Engineer Associate — Microsoft |
| ✓ Azure AI Engineer Associate — Microsoft | |

EDUCATION

MBA in Total Quality Management — Sikkim Manipal University 2013 – 2015

B.E. in Information Technology — RGTU, Bhopal 2005 – 2009
